

WALMART RETAIL CORPORATION

Power BI Sales Analytics Dashboard

Business Requirements Document

Version 1.0 | February 2026 | Confidential

Document Type	Business Requirements Document
Project	Walmart Sales Analytics Power BI Dashboard
Client	Walmart Retail Corporation
Prepared For	BI Development Team & Project Sponsor
Data Coverage	2020 – 2023 561,000 Transactions 52 Stores 4 Regions
Report Pages	Page 1: Executive Overview Page 2: Product & Customer Insights
Version	1.0 — Initial Release February 2026

1. ABOUT WALMART & BUSINESS PROBLEM

1.1 About the Business

Walmart is one of the world's largest retail corporations, operating hypermarkets, supermarkets, department stores, convenience stores, and specialty outlets across the United States. The business serves millions of customers daily across five product categories — Clothing, Electronics, Home Goods, Books, and Office Supplies.

Stores are organised into four regional territories: Central, East, South, and West, each managed by a dedicated team responsible for sales targets and operational performance.

1.2 Business Problem

Despite a large and growing store network, Walmart currently lacks a centralised analytics platform. Three core problems exist:

- Leadership has no single trusted view of revenue, profit, or growth performance. Decision-making relies on manually compiled spreadsheets that are often out of date.
- Regional managers cannot easily compare store or category performance within their territory, or track progress against the prior year.
- Marketing and finance teams must request custom data extracts for every campaign or budget review, creating bottlenecks and slowing decisions.

2. SOLUTION OVERVIEW

2.1 What Is Being Built

A Power BI Sales Analytics Dashboard that consolidates data from all stores, regions, products, and customers into one self-service platform. Any authorised user can open it and answer their own business questions without involving the data team.

2.2 Data Sources

The dashboard is built on five source data files provided by Walmart:

Data File	Records	What It Contains
Sales Transactions	~561,000	Every sale 2020–2023: date, store, product, customer, revenue, quantity, payment method
Customer Data	~1,000	Customer demographics: name, age, gender, city, state, segment (Consumer / Corporate / Home Office)
Product Catalogue	~500	Product details: category, sub-category, brand across 5 product lines
Employee Data	~200	Store staff: position, department, hire date
Store Directory	52	Store locations: city, state, region (Central / East / South / West), store type

2.3 Two-Page Report Structure

Page	Audience	What It Shows
Page 1 — Executive Overview	Senior Leadership	Total revenue, profit, transactions, year-on-year performance, revenue trend over time, category and regional breakdown

Page 2 — Product & Customer Insights	Regional Managers & Marketing	Category performance, customer segment split, age group analysis, payment method breakdown, year-on-year change by category
--------------------------------------	-------------------------------	---

3. KEY PERFORMANCE INDICATORS

3.1 KPIs the Dashboard Displays

The following KPIs are visible on the dashboard at all times and update instantly when any filter is applied:

KPI Area	What Is Shown
Revenue	Total revenue, net revenue, month-to-date, year-to-date, and rolling totals
Year-on-Year Growth	Revenue growth vs prior year in both dollar value and percentage — for revenue, transactions, customers, and profit
Profitability	Total profit, profit margin percentage, and how margin has changed vs prior year
Transactions	Total number of sales, average order value, and transaction count vs prior year
Customers	Unique customer count, revenue per customer, and year-on-year customer growth
Store Performance	Revenue and transaction averages per store, store ranking by revenue
Product & Category	Revenue by product category, category ranking, and top-performing products
Customer Segments	Revenue split by Consumer / Corporate / Home Office, age group, and payment method

4. FILTERS, DESIGN & BEHAVIOUR

4.1 User Filters

Users can filter all visuals simultaneously using six controls. Filters selected on Page 1 remain active when navigating to Page 2.

Filter	Available Options
Year	2020, 2021, 2022, 2023
Region	Central, East, South, West
Store Type	Hypermarket, Supermarket, Department Store, Convenience Store, Specialty Store
Product Category	Clothing, Electronics, Home Goods, Books, Office Supplies
Customer Segment	Consumer, Corporate, Home Office
Age Group	Youth (18-24), Young Adult (25-39), Middle Age (40-59), Senior (60+)

4.2 Dashboard Behaviour

- Clicking any chart bar, segment, or data point instantly filters every other visual on that page.
- KPI cards show the current value and the year-on-year change. The change indicator is green when performance is better than the prior year and red when it is worse.
- Hovering over any data point shows a tooltip with additional context including the prior year value and percentage change.
- All numbers are formatted consistently — revenue in dollars with comma separators, percentages to one decimal place, and large values abbreviated (e.g. \$779.8M).

4.3 Visual Design

- Walmart brand colours throughout — Blue (#0071CE) as the primary colour and Yellow (#FFC220) as the accent.

- Light background theme (#F7F9FC) applied across both pages for a clean, professional appearance.
- Canvas size 1280 × 720 px (16:9) — optimised for widescreen presentations.
- Calibri font used exclusively across all visuals, titles, labels, and data values.
- Custom Walmart theme file applied via Power BI's theme import feature.

5. ACCEPTANCE CHECKLIST & SIGN-OFF

5.1 Delivery Checklist

The project will be considered complete when every item below has been reviewed and confirmed by the Walmart project sponsor.

#	Requirement	Status
1	All source data is loaded, cleaned, and the data model is in place with correct relationships	☒ Done
2	A calendar table exists and all time-based calculations work correctly	☒ Done
3	All required KPIs and year-on-year measures are built and return correct values	☒ Done
4	Page 1 — Executive Overview is complete with KPI cards, trend chart, and category breakdown	☒ Done
5	Page 2 — Product & Customer Insights is complete with segment and age group analysis	☒ Done
6	All six filters are present and synchronised across both report pages	☒ Done
7	Clicking any chart element filters the other visuals on the page	☒ Done
8	KPI cards show year-on-year change with green / red colour indicators	☒ Done
9	The report uses Walmart brand colours and theme throughout both pages	☒ Done
10	All figures are formatted correctly — currency, percentages, abbreviated large numbers	☒ Done
11	The final .pbix file opens without errors and is accompanied by a handover note	☒ Done

5.2 Sign-Off

Role	Full Name	Signature & Date
Project Sponsor (Walmart)		
BI Developer
